Shopify – unique E-Commerce platform №1 in the world

We are at **Web-Systems.Solutions** know what you expect from the end product. Therefore, putting your ideas into action year after year, we can always offer you the most effective solution for your business.

Having analyzed dozens of content management systems (CMS) - we have come to the conclusion that Shopify is not just the most popular online shopping platform.

Why? - We'll show you.

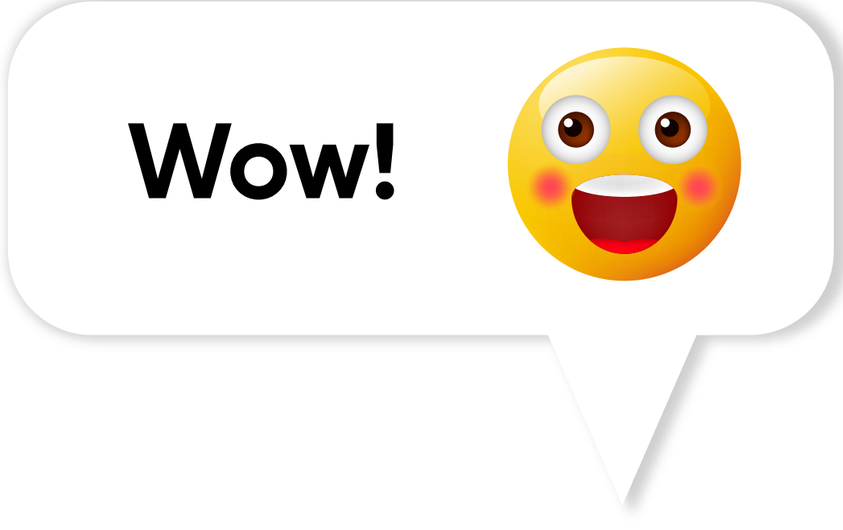
E-Commerce platform

Web-platform for internet stores. It's not a marketplace, it's an instrument for creating own brand shop.

To understand the popularity of Shopify - just look at logos below that using it.

Did you recognise at least 1 logo?



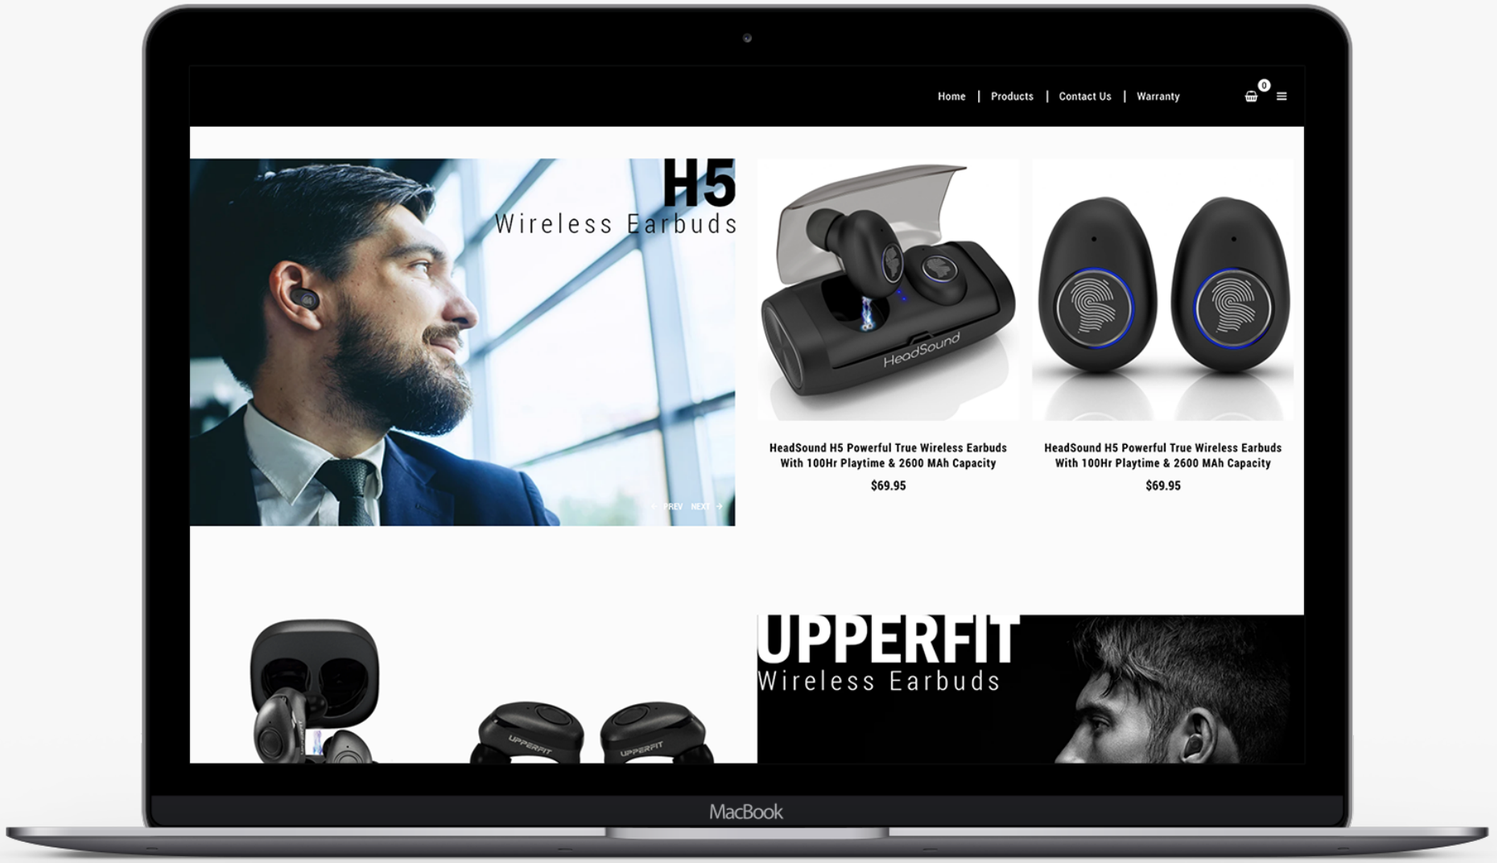
These are companies with millions of marketing budgets that could hire a single staff of programmers and developing online stores for themselves. But they chose **Shopify** just like us.

We are shopify partners in development of online stores, so for the time that we're working with the platform - we learned how to work with all aspects of development, design and integrations.

With what work in Web-Systems Solutions? – (Design – Theme Customization)

Yes, we adjust ready design, if you like to use one of hundreds of thousands of ready-made templates*, or creating unique with our designers. The only one in the whole world, we guarantee that!

– Make Beauty.



*ready-made templates can be paid and free

With what work in Web-Systems Solutions? – (Development)

Development - we create an online store on Shopify, set it up, and give you access, like a car dealer give you a car keys. You just sit down and move into the world of sales, scaling the range of your goods and services.

With what work in Web-Systems Solutions? – Integrations (Modules and custom solutions)

Our Ninja-developers that are responsible for Shopify development will integrate any modules for your needs. If there is no ready module - we will code it from scratch.

Available integration?

- Payment systems
- Delivery, accounting of goods
- Marketing
- Almost every services with own API
